10 Educational environments: Resource management portal for laboratories using real devices on the Internet

Stefan Zimmerli, Marc-Alain Steinemann, Torsten Braun

July 2003 **ACM SIGCOMM Computer Communication Review**, Volume 33 Issue 3

Publisher: ACM Press

Full text available: ⬚ pdf(343.16 KB)   Additional Information: full citation, abstract, references, index terms

Internet-based distance learning is slowly gaining new territories and substituting current teaching methodologies. However, distance learning not only consists of transferring documents to web pages, but also of developing new concepts, methods, and implementation architectures. This article presents concepts and implementation issues for an example remote hands-on networking laboratory. The described course gives access to real network hardware via the Internet. In particular, authentication, ...

11 Building computational grids with apple's Xgrid middleware
Baden Hughes
January 2006 **Proceedings of the 2006 Australasian workshops on Grid computing
and e-research - Volume 54 ACSW Frontiers '06**
Publisher: Australian Computer Society, Inc.
Full text available: pdf(246.93 KB)   Additional Information: full citation, abstract, references, index terms

Apple's release of the Xgrid framework for distributed computing introduces a new
technology solution for loosely coupled distributed computation. In this paper
systematically describe, compare and evaluate the Apple native Xgrid solution and a range
of third party components which can be substituted for the native versions. This
description and evaluation is grounded in practical experience of deploying a small scale,
internationally distributed, heterogenous computational infrastructure based ...

Lighter data retrieval and an alternative to NIS.

13 Teaching operating systems administration with user mode linux
Renzo Davoli
June 2004 **ACM SIGCSE Bulletin , Proceedings of the 9th annual SIGCSE conference
on Innovation and technology in computer science education ITiCSE '04,**
Volume 36 Issue 3
Publisher: ACM Press

Full text available: pdf(99.64 KB)   Additional Information: full citation, abstract, references, citings, index
terms

User Mode Linux is a virtual machine running on a GNU-Linux operating system. It is the
right choice for teaching operating systems' administration, as it does not need any
dedicated hardware. It runs at user level (no need for root, i.e. administrator, access or
possible security threats) and it does not have the performance problems of an emulator.
This paper describes how to set up a laboratory for teaching operating systems'
administration.

Keywords: administration, laboratory, operating systems, security, teaching, virtual
machine

14 Putting OSX in an open access lab: (or "The Joy of X")
David L. R. Houston
September 2003 **Proceedings of the 31st annual ACM SIGUCCS conference on User
services SIGUCCS '03**
Publisher: ACM Press
Full text available: pdf(211.45 KB)   Additional Information: full citation, abstract, index terms

This paper discusses the challenges of putting Apple Macintosh OSX into open access and
computer lab environments.

Keywords: Macintosh, OSX, configuration, imaging, integration, lab, labs, maintenance,
open access, security, software distribution, workstation

16 Adapting globus and kerberos for a secure ASCI grid
Patrick C. Moore, Wilbur R. Johnson, Richard J. Detry
November 2001 **Proceedings of the 2001 ACM/IEEE conference on Supercomputing
(CDROM) Supercomputing '01**
Publisher: ACM Press
Full text available: pdf(143.26 KB)   Additional Information: full citation, abstract, references, index terms

Porting a complex secure application from one security infrastructure to another is often
difficult or impractical. Grid security associated with the Globus toolkit is supported by a
Grid Security Infrastructure (GSI) based on a Public Key Infrastructure where users
authenticate to the grid using X509 certificates. Kerberos security is based on a trusted
third party, secret key infrastructure where users authenticate using encrypted tickets.
However, both GSI and Kerberos provide a Generic Secur ...

Keywords: ASCI, GSSAPI, globus, grid, kerberos, security

17 Digital village: Pernicious ports

Full text available: html(12.10
KB)   Additional Information: full citation, index terms

19 Access control: First experiences using XACML for access control in distributed
systems
Markus Lorch, Seth Proctor, Rebekah Lepro, Dennis Kafura, Sumit Shah
October 2003 **Proceedings of the 2003 ACM workshop on XML security XMLSEC '03**
Publisher: ACM Press
Full text available: pdf(459.30 KB)   Additional Information: full citation, abstract, references, citings, index
terms, review

Authorization systems today are increasingly complex. They span domains of
administration, rely on many different authentication sources, and manage permissions
that can be as complex as the system itself. Worse still, while there are many standards
that define authentication mechanisms, the standards that address authorization are less

well defined and tend to work only within homogeneous systems. This paper presents XACML, a standard access control language, as one component of a distributed a ...

Keywords: access control decision, access control enforcement, authorization, distributed system security, policy language, policy management

20 <u>Scalable directory services using proactivity</u>   ■
Fabián E. Bustamante, Patrick Widener, Karsten Schwan
November 2002 **Proceedings of the 2002 ACM/IEEE conference on Supercomputing Supercomputing '02**
Publisher: IEEE Computer Society Press
Full text available: <u>pdf(154.65 KB)</u>   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index terms</u>

Common to computational grids and pervasive computing is the need for an expressive, efficient, and scalable directory service that provides information about objects in the environment. We argue that a directory interface that 'pushes' information to clients about changes to objects can significantly improve scalability. This paper describes the design, implementation, and evaluation of the Proactive Directory Service (PDS). PDS' interface supports a customizable 'proactive' mode through which ...

5 Course design & learning enhancement: A unique experiential model for teaching network administration
Sylvia Perez-Hardy
October 2003 **Proceedings of the 4th conference on Information technology curriculum CITC4 '03**
Publisher: ACM Press

Full text available: pdf(156.22 KB)   Additional Information: full citation, abstract, references, citings, index terms

We have moved from teaching networking in a purely theoretical manner using lecture and paper exercises to a lab-based approach. This serves to illustrate and reinforce the theory imparted to the students in lecture and through readings. But not all lab teaching models are created equal. In the introductory course the model used is one of very specific guidance in the performance of the lab experiments. The students then observe the results and collect the data, which they use to answer very spe ...

11 Exploring Linux as an operating system in the CS curriculum
E. Grant Eastman
April 2006 **Journal of Computing Sciences in Colleges**, Volume 21 Issue 4
Publisher: Consortium for Computing Sciences in Colleges
Full text available: ⬚ pdf(186.63 KB)   Additional Information: full citation, abstract, references, index terms

The Linux operating system as a variant of UNIX is having a significant impact on the computing community including major corporations and other organizations. This paper describes the development and implementation of a course on the UNIX operating system using Linux as the vehicle. The course includes discussion of the UNIX development, installation and configuration of Linux on personal computers, and experience with scripting including Perl. Student experiences with the course and their resp ...

13 A web-based tool for managing the submission of student work
David Wolff
December 2004 **Journal of Computing Sciences in Colleges**, Volume 20 Issue 2
Publisher: Consortium for Computing Sciences in Colleges
Full text available: ⬚ pdf(333.31 KB)   Additional Information: full citation, abstract, references

The electronic submission of student work is an issue that every computer science department must deal with in one way or another. Many departments use the least common denominator: email. Despite its convenience, email can be difficult to organize and large files can quickly fill up an instructor's inbox. This paper presents a web-based system that provides for the on-line submission and retrieval of student work. Students can upload their work from anywhere in the world with access to a web br ...

15 <u>Constraints: On context in authorization policy</u>
Patrick McDaniel
June 2003 **Proceedings of the eighth ACM symposium on Access control models and technologies SACMAT '03**
Publisher: ACM Press

Full text available: <u>pdf(316.39 KB)</u>   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index terms</u>

Authorization policy infrastructures are evolving with the complex environments that they support. However, the requirements and technologies supporting context are not yet well understood. Often implemented as condition functions or predefined attributes, context is used to more precisely control when and how policy is enforced. This paper considers context requirements and services in authorization policy. The properties and security requirements of context evaluation are classified. A key obs ...

18 <u>Extensible job managers for grid computing</u>
Paul D. Coddington, Lici Lu, Darren Webb, Andrew L. Wendelborn
February 2003 **Proceedings of the 26th Australasian computer science conference - Volume 16 ACSC '03**
Publisher: Australian Computer Society, Inc.
Full text available: <u>pdf(293.64 KB)</u>   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>index terms</u>

Grid computing is becoming an important framework for enabling applications to utilize widely distributed collections of computational and data resources, however current grid software is still immature and rather difficult to use. The Globus Grid Toolkit is a set of low-level tools, protocols and services that has become a defacto standard for basic grid computing infrastructure. The Globus Resource Allocation and Management (GRAM)

service provides for the management and remote execution of job ...

20 Monitoring hacker activity with a Honeynet
Kevin Curran, Colman Morrissey, Colm Fagan, Colm Murphy, Brian O'Donnell, Gerry Fitzpatrick, Stephen Condit
March 2005 **International Journal of Network Management**, Volume 15 Issue 2
Publisher: John Wiley & Sons, Inc.
Full text available: pdf(434.12 KB)   Additional Information: full citation, abstract, references, index terms

The Honeynet Project was founded by 30 US based security professionals with the intention of researching the techniques, tools, tactics and motives of hackers and the 'blackhat' community in general. A Honeynet Project is an all volunteer, non-profit organization committed to sharing and learning the motives, tools, and tactics of the hacking community. It is comprised of a number of information security professionals dedicated to honeynet research and information security. This paper outlines t ...
